

Bdnf-Flox(SD)

Gene Summary

Model Description

These rats carry loxP sites flanking exon2 of Bdnf. When crossed with a Cre recombinase-expressing strain, this strain is useful in eliminating tissue-specific conditional expression of Bdnf gene.

*Literature published using this strain should indicate: Bdnf-Flox(SD) rats (Cat. NO. NR-CKO-230145) were purchased from Shanghai Model Organisms Center, Inc..
