## Model Description

A V5-2A-CreERT2-WPRE-polyA expression cassette was knocked into the Pbsn gene stop codon site.

**Research Application:** Cre recombinase tool, epithelial cells of the prostate.

\*Literature published using this strain should indicate: Pbsn-2A-CreERT2 mice (Cat. NO. NM-KI-200190) were purchased from Shanghai Model Organisms Center, Inc..

## Validation Data

CreERT2-mediated recombination in prostate epithelial cells of Pbsn<sup>CreERT2/+</sup>; Rosa26<sup>tdTomato/+</sup> mice. This strain represents an effective tool for generating prostate specific-targeted mutants.

cells expressed in adrenal gland, pancreas, testis, muscle and thymus. Tissues that unexpressed include brain, spinal cord, eyeball, heart, lung, liver, stomach, brown fat, kidney, colon, small intestine, spleen, and skin.
